

Junior Full Stack Web Developer

Background

2bPrecise is building a robust cloud-based solution to support healthcare providers and their patients as they adopt precision medicine and genetics/genomics as the new standard of care.

We are looking for a skilled web developer to be a key player in the coding, innovative design and layout of our product. This individual will create high-level design, establish detailed design specifications, and enforce technical and software coding standards. Responsibilities also include process alignment and team mentoring.

- Gather and refine specifications and requirements based on technical needs
- Write well-designed, testable, efficient code by using best software development practices
- Create and maintain software documentation
- Research emerging technologies/industry trends and apply them in the development process

Requirements

- BSc degree in computer science/software engineer or relevant field
- Experience in web development
- Experience in C#/Java software development
- Strong understanding of OO programming
- Experience in JS/TS, HTML5, CSS3
- Experience with one or more web frameworks & libraries such as Angular/Vue.js/React
- Experience with asynchronous programming
- Web unit testing and automation
- Team player, strong communication skills, empathy and initiative
- English; high level of proficiency (reading, writing, speaking)

Advantages

- Development in service-oriented environment
- Web server-side development such as ASP.NET Core
- Big data analytics or data stream processing
- Document store database systems: MongoDB, Couchbase, etc.
- Working as Agile team member

General Information

- Full-time position
- Start Date: Immediate
- Location: Technology Center – Beer Sheva, Israel
