This individual will create high-level design, establish detailed design specifications, and enforce technical and software coding standards. Responsibilities also include process alignment and team mentoring.

- Gather and refine specifications and requirements based on technical needs
- Write well-designed, testable, efficient code by using best software development practices
- Create and maintain software documentation
- Research emerging technologies/industry trends and apply them in the development process

**Requirements**

- At least 5 years of experience in web development
- At least 3-5 years of experience in C#/Java
- Strong understanding of OO programming
- Experience with document store database systems: MongoDB, Couchbase, etc.
- Development in service-oriented environment
- Deep expertise and hands on experience with
  - ASP.NET MVC
  - REST APIs
  - HTLM5, CSS3, JS/TS
  - Web frameworks & libraries: Angular/Vue.js /React
  - Web unit testing and automation

**Preferred**

- Experience in complex architectural design
- ASP.NET Core
- Microservices architecture
- OAUTH/OpenID Connect
- Strong understanding of OO design patterns
- Big data analytics or data stream processing
- Working as Agile team member

**General Information**

- Full-time position
- Start date: Immediate
- Location**:** Technology Center – Beer Sheva, Israel
